Education

Ho Chi Minh City University of Technology (HCMUT) - Vietnam National University Ho Chi Minh City (VNU-HCM), Computer Science,

- **Language Certificate:** IELTS 7.0, taken on 20 May 2023

Technologies

Programming Languages: C++, Python, SQL, HTML, CSS, JavaScript

Databases: Microsoft SQL Server, PostgreSQL, MySQL

Web Technologies: .NET, Node.js, React.js, Php.

Tools: Git, Docker, Cisco Packet Tracer, Figma, draw.io,

Publications

Khue Nong Thuc, Khoa Tran Nguyen Anh, Tai Nguyen Huy, Du Nguyen Hao Hong, Khanh Dinh Ba. **Smart AI Fridge: IoT-enabled food management with computer vision and robust calibration.** arXiv preprint, arXiv:2509.07400, 2025.

Experience

Software Developer Intern Jun 2025 – Aug 2025 [*SHPT Software Joint Stock Company*], Ho Chi Minh City

- Contributed to the development of a Human Resource Management (HRM) online portal as a full-stack developer, implementing features across the frontend (React.js), backend (ASP.NET), and database (SSMS).
- Tools Used: React.js, ASP.NET, Microsoft SQL Server (SSMS), Git.

Projects

Tic Tac Toe Web Game (PHP Full-Stack)

- Built a browser-based Tic Tac Toe game using PHP for server logic and session-based game state management, with a dynamic UI supporting real-time move updates.
- Implemented game reset, win/draw detection, and responsive design for desktop and mobile.
- Tools Used: PHP, HTML, CSS, JavaScript, LaTeX.
- Github Link: <https://github.com/KhoaTraaaannn/TicTacToe.git>

Campsite E-Commerce Platform (Campsite Booking & Store)

- Developed a full e-commerce + booking platform for campsite services, supporting product purchases (camping gear, food, accessories) and campsite reservation workflows.
- Built features including authentication, shopping cart, checkout, booking calendar, payment flow simulation, and admin dashboard for inventory and reservation management.
- Designed and implemented a mobile-friendly and scalable front-end interface.
- Tools Used: TypeScript, React.js, CSS, Node.js, LaTeX.
- Githublink: <https://github.com/DankoFox/campgear-rental.git>

Library Management System (TypeScript FE + .NET BE)

- Engineered a strongly-typed front-end using TypeScript (React) with reusable components, API service layers, and optimized state handling.
- Practiced Business Analyst and Product Owner responsibilities, including requirements elicitation, user story definition, backlog prioritization, and Agile sprint planning throughout the software development lifecycle.

- Collaborated with backend developers to integrate RESTful APIs, ensuring seamless frontend-backend communication within a modular ASP.NET Core architecture.
- Tools Used: TypeScript, React.js, .NET (ASP.NET Core), PostgreSQL, Jira, Figma, LaTeX.
- Github Link: <https://github.com/karuufumi/Software-Project-Management-C03011-.git>

Portal Customer Service

- Supported the conceptual design of a new customer project submission module for a corporate portal, producing structured wireframes and user-flow prototypes in Figma.
- Collaborated with cross-functional teams to define UX requirements and interface behavior prior to development handoff.
- Tools Used: Figma, Chatwork, Excel, LaTeX.

Doctor Appointment Booking Website (PHP MVC)

- Developed a multi-role healthcare booking platform using PHP MVC architecture, integrating front-end interfaces with a MySQL relational database.
- Built authentication, doctor profile management, appointment scheduling, and administrative modules to streamline the online booking workflow.
- Tools Used: PHP, HTML5, CSS3, JavaScript, MySQL, MVC, XAMPP, LaTeX.

SCAMS - Smart Campus System

- Designed and implemented the Calendar Check module, providing real-time classroom schedule visualization and availability checking.
- Contributed to the Authentication, Dashboard, and Room Booking modules by enhancing user experience, integrating backend APIs, and refining booking workflows.
- Tools Used: React.js, TypeScript, Node.js, Express.js, MongoDB, JWT, Swagger, Vite, LaTeX.
- Github Link: <https://github.com/Vinzecta/ASE-SCAMS.git>

Smart AI Fridge (IoT + Computer Vision)

- Built an IoT smart fridge using ESP32-CAM and computer vision for live food recognition, inventory monitoring, and temperature tracking.
- Improved detection accuracy under occlusion and low-light using adaptive focal loss with error calibration; co-authored research published on arXiv.
- Tools Used: Python, TensorFlow, OpenCV, MongoDB, Node.js/Express, React.js, Recharts.js, LaTeX.
